PREFACE

There has been an unprecedented demand recently on the part of those who are engaged in developing the natural and mineral resources of this State for an authentic and complete list of all the books, reports, papers, and maps written and prepared by the State Geologist. Many of these reports take up the geology of coal and oil, the two greatest mineral assets of Kentucky. A number of these reports, due to the great demand for them, are now entirely exhausted in edition, but may be consulted in any of the large public libraries of the State. The publications not now available have been so designated on the list herewith presented, which it is hoped will be of service to the interested public.

Director and State Geologist.
